The Polish market of IT-ICT services and products is one of the fastest growing sectors of the country's economy. The Polish IT market is estimated to be worth 9 billion dollars, making it the second-largest IT services market in Central and Eastern Europe and placing it among the top twenty global markets.

The Polish market of IT-ICT services and products is one of the fastest growing sectors of the country's economy. The Polish IT market is estimated to be worth 9 billion dollars, making it the second-largest IT services market in Central and Eastern Europe and placing it among the top twenty global markets.

The distinct growth tendencies are additionally reflected in the exponential increase of Polish exports, with an annual volume oscillating around 2 billion dollars. Polish IT-ICT products and services are sold to around 80 countries.

In 2011 Poland moved up 5 positions in the ranking devoted to the competitiveness of the global IT industry – the Economist Intelligence Unit. A less earthbound accomplishment was the use of Polish Rover and Orbiter Delta Mars software in NASA's analyses and research of the Red Planet. Its use allowed for hitherto impossible analysis of the planet's surface with unparalleled accuracy as well as the creation of specialized visualizations and precise calculations.

Also, the Polish video game industry celebrates huge international achievements, becoming one of our flagship export commodities, in addition to hardware and software.
