Polish Medical Device and Measuring Equipment Industry

2015-12-19 20:47:29

Inventiveness has always been a Polish area of expertise. This is why it is not surprising, that our country actively participates in researching new technologies, that are designed with the most innovative patents and discoveries of the medical sector. Technological development, the possibility to help patients more fully, wide access to new forms of treatment, prevention, and saving human lives, are all based on the ability to properly take advantage of the unusually broad achievements of Polish science.

Inventiveness has always been a Polish area of expertise. This is why it is not surprising, that our country actively participates in researching new technologies, that are designed with the most innovative patents and discoveries of the medical sector. Technological development, the possibility to help patients more fully, wide access to new forms of treatment, prevention, and saving human lives, are all based on the ability to properly take advantage of the unusually broad achievements of Polish science.

Innovations in the field of Polish medical equipment and medical technologies have caused a rapid growth of the industry's value over the last years. This tendency resulted in a current value of approximately 6 billion PLN. Among others, Polish producers of disposable medical equipment, who supply customers around the world, are responsible for this success. We are also the producers of world-renowned electrocardiography apparatuses, high-precision surgical instruments, and leaders in the production of stethoscopes of all three types, *cryochambers*, ultrasound devices and Doppler echocardiography technology.
