Polish Mining Industry

2015-12-19 20:51:15

The fact of having deposits of raw materials that are difficult and complicated to reach influenced the development of the most modern mining technologies, which were also recognized outside Poland. Currently, every ninth machine active in the global mining process is made in Poland.

The fact of having deposits of raw materials that are difficult and complicated to reach influenced the development of the most modern mining technologies, which were also recognized outside Poland. Currently, every ninth machine active in the global mining process is made in Poland.

Polish producers of mining equipment have been celebrating successes on international markets for years. The global mining industry values equipment made in Poland, mainly due to the most modern technologies, which are successively implemented in the produced solutions. The perfected technology skilfully combines two of the most important issues for the mining industry: the increase of mining efficiency and enhancement of work safety in mines. The innovative and highly durable machine sets produced only in Poland, consisting of high capacity combines, road headers, and conveyor systems are able to comprehensively guarantee work safety and maximize the profitability of the exploitation of global raw material deposits.

Excellent and effective technology, efficiency, safety, modernity, innovativeness, and complementarity of the offering are qualities that set apart the mining equipment made in Poland – the mine of cutting edge solutions.
